

CLAIMS

I claim:

1. A nozzle structure of a lawn sprinkler, said nozzle structure comprising:

a nozzle piece provided with a plurality of water emission holes;

a guide seat provided at one end with a fastening portion and a fitting portion, said guide seat further provided at other end with a tapered portion, said fastening portion being used to hold securely said nozzle piece; and

a receptacle provided at one end with an opening, and in an interior of other end thereof with a locating portion, said receptacle being used to hold said guide seat in such a way that said tapered portion of said guide seat is located by said locating portion of said receptacle, and that said fitting portion of said guide seat is fitted into said opening of said receptacle;

wherein said guide seat is further provided at the one end with a leakproof flange whereby said leakproof flange is located between said fastening portion and said fitting portion of said guide seat such that said opening of said receptacle is sealed off by said leakproof flange.
